## Installation and jointing of electricity cables

Dear Customer,

We run the electricity network delivering power to your area and we are due to start work soon on a project to upgrade equipment to ensure reliable power supplies for local homes and businesses. The work, in partnership with our contractor Modus Utilities, is needed to divert electricity cables for the HS2 Project. Our work should not have any impact on your electricity supply

Work is due to start in mid Sept 2021 with planned working hours of Monday to Friday 8am to 5pm. There may be times when weekend working is required however will minimise these shifts where possible.

We expect to complete these works by the end of Jan 2022. During this period, works will be carried out within the carriageway/footway of Drummond Street, North Gower Street, Gower Place & Gordon Street. The works will consist of excavation of cable joint bays as the works progress along the route. Each section will be fenced off and acoustic barriers, where applicable, will be installed to limit noise. We will provide clear signage for pedestrians around the work sites. At certain points parking bay and bus stop suspensions will be required and we will provide updates at [hs2incamden.co.uk](https://hs2incamden.co.uk)

We will continue to follow government and Public Health England advice to keep our employees, contractors and customers safe and our work will be carried out in line with the latest COVID-19 health and safety guidance. Thank you for maintaining social distance while our teams work in your community.

We apologise for any inconvenience caused and will make every effort to minimise any impact on your community. In the event of any difficulties, please contact Modus Utilities Project Manager, Damian Webber, on **07712 300058**.

Yours sincerely
