

## Old Oak Common Network Rail HS2 Enabling Works

September 2021

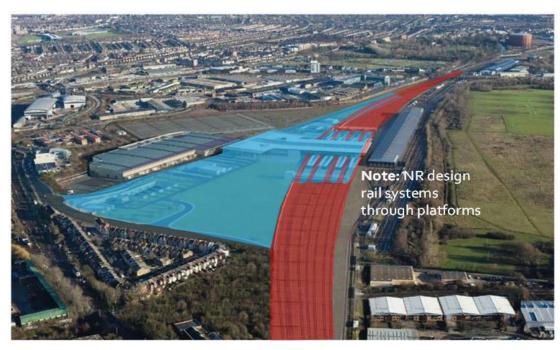

#### **Introductions**

- Hazel Maguire Senior Communications Manager
- Emily Hanlon Community Relations Executive
- Andrew Fleming SRSA Project Lead (Construction)

# NetworkRail

### Background

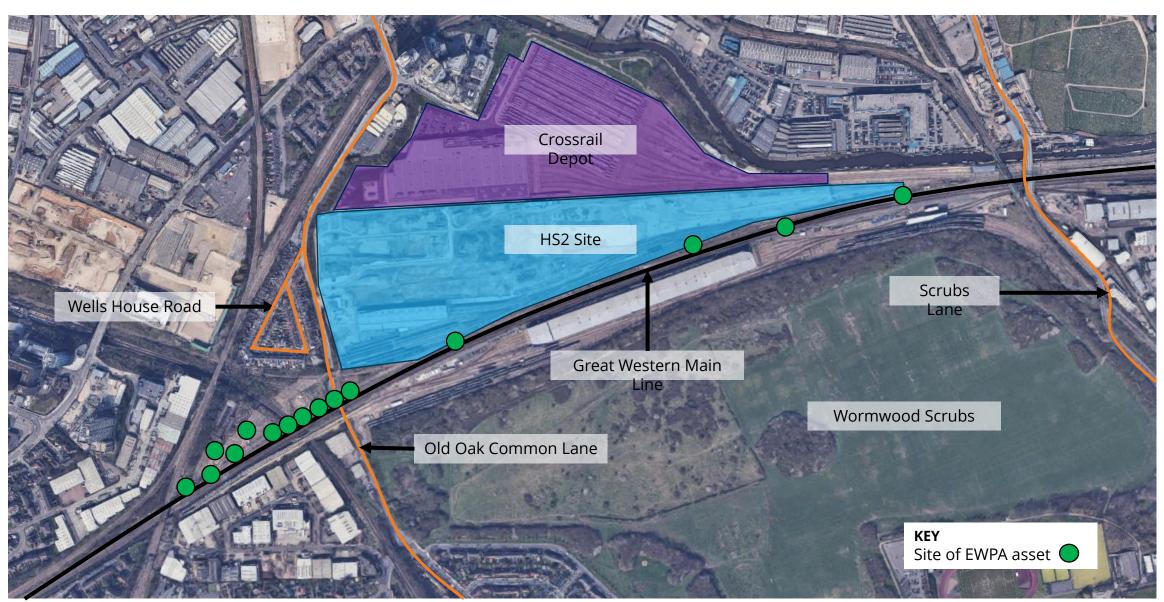

Old Oak Common Station will be a key interchange station on the HS2 network. It will connect HS2 services with Crossrail and GWR services running on the Great Western Main Line.

Changes will needed to be made to the Network Rail infrastructure in the area to facilitate the construction of the new station and track alignment.

Work is commencing on the first stage of enabling works, known as Early Works Package A (EWPA). South Rail Systems Alliance (SRSA) has been contracted to complete the works.

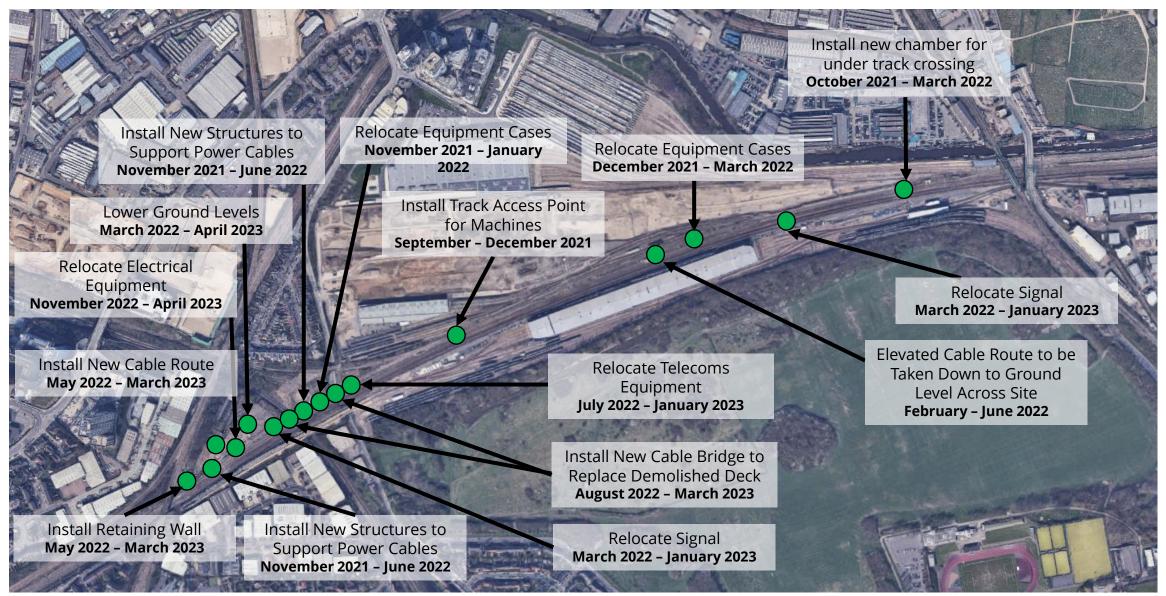

## Early Work

# NetworkRail

### Early Work

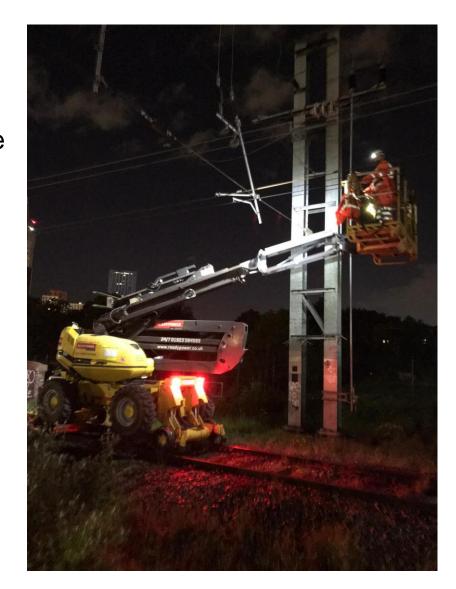

### Construction Methodology

SRSA will use construction methodologies which minimise impact to the residents where safe to do so. Where possible the work will be done daytime, though due to the nature of the work, working on the existing infrastructure, night-time working in possessions will be required.

Work on installing piles will be undertaken at daytime in extended possessions to minimise disruption.

Noise reduction methods will be used where practicable and noise monitoring will be undertaken to ensure agreed limits are not exceeded.

Environmental Plan in place which sets out requirements for protection of flora & fauna.

# NetworkRail
