

Stechford to Aston (SAS13) Bridge Replacement

In partnership with

SKANSKA

HS2

On behalf of HS2, Network Rail and Skanska are replacing the Stechford to Aston (SAS13) Bridge in your area with a new bridge which will pave the way for high-speed trains to travel to Birmingham City Centre.

The new SAS13 bridge will be the longest single span bridge in the Midlands and one of the largest in the UK. We informed you about our plans to demolish the existing Stechford to Aston (SAS13) bridge last year, which took place in Autumn 2021.

We're now building the replacement bridge which, when completed, will weigh 24,000 tonnes and measure 93.35 metres in length. This new bridge will be completed in April and will be lifted into place in May 2022 using one of the largest cranes in the UK.

We will be keeping you informed as our work to replace the bridge and put everything back in place continues. If you're interested in finding out more about how we construct a large railway bridge of this kind, please check out footage of our work at: tiny.cc/SAS13 or scan the QR code.

If you have any queries about our work please email us at NRHS2@networkrail.co.uk or you can telephone our 24-hour national helpline on **03457 11 41 41**
