| <b>Reason for clearance:</b>                                                                          | As part of Skanska Costain STRABAG (SCS) asset protection mitigation works, additional ground investigations are required in the vicinity of the tree and it's RPA. The headroom required is approx. 3m, the canopy currently hangs low over the site entrance and therefore may be impacted by machinery entering the working area. It is therefore recommended that localised canopy reduction and pruning is undertaken to facilitate access of the borehole rig, and an arboricultural specialist is in attendance to supervise activities within the RPA. |                  |            |                 |

| Have all practicable means to negate need for works to tree been investigated? Please provide details | Yes, only minor pruning is being undertaken, and only what is necessary. Works are being completed outside of nesting bird season. The location of the borehole was reviewed and confirmed any further into the pavement and there is a risk of striking a live utility service (water and gas present), and any closer to the tree has a further risk of root damage.                                                                                                                                                                                         |                  |            |                 |

Growing very close to brick boundary wall and causing cracks to develop as the stem slowly expands. Spreading canopy with signs of previous management; several end-loaded branches noted being supported by cable bracing. |
